## Chapter 1- PRECAUTIONS & SAFETY NOTICES

### 1. SAFETY PRECAUTIONS

This monitor is manufactured and tested on a ground principle that a user's safety comes first. However, improper used or installation may cause damage to the monitor as well as to the user.

#### WARNINGS:

- This monitor should be operated only at the correct power sources indicated on the label on the rear of the monitor. If you're unsure of the power supply in your residence, consult your local dealer or Power Company.
- Do not try to repair the monitor by yourself, as it contains no user-serviceable parts. This monitor should only be repaired by a qualified technician.
- Do not remove the monitor cabinet. There are high-voltage parts inside that may cause electric shock to human bodies.
- Stop using the monitor if the cabinet is damaged. Have it checked by a service technician.
- Put your monitor only in a clean, cool, dry environment. If it gets wet, unplug the power cable immediately and consult your local dealer.
- Always unplug the monitor before cleaning it. Clean the cabinet with a clean, dry cloth. Apply non-ammonia based cleaner onto the cloth, not directly onto the glass screen.
- Do not place heavy objects on the monitor or power cord.

### 2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety visual inspections and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Before replacing any of these components read the parts list in this manual carefully. The use of substitute replacement parts, which do not have the same safety characteristics as specified in the parts list, may create shock, fire, or other hazards.

### 3. SERVICE NOTES

- When replacing parts or circuit boards, clamp the lead wires around terminals before soldering.
- Keep wires away from high voltage, high temperature components and sharp edges.
- Keep wires in their original position so as to reduce interference.
- Adjustment of this product please refers to the user's manual.

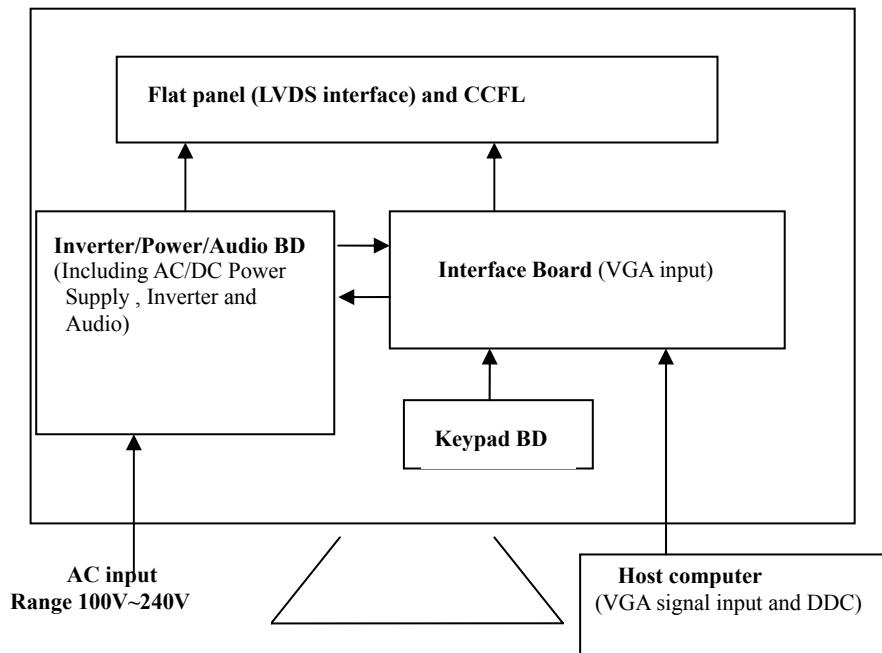

## **Chapter 2- SERVICE TOOLS & EQUIPMENT REQUIRED**

1. SIGNAL GENERATOR
2. MULTIMETER
3. SCREW DRIVER
4. OSCILLOSCOPE
5. Soldering IRON
6. SOLDER
7. VGA Cable (15pins point to point)
8. DVI Cable(DVI-D 24+1 pin)
9. Color Analyzer
10. Myson412 ISP Board
11. EDID Board
12. EDID program file

## Chapter 3- CIRCUIT THEORY

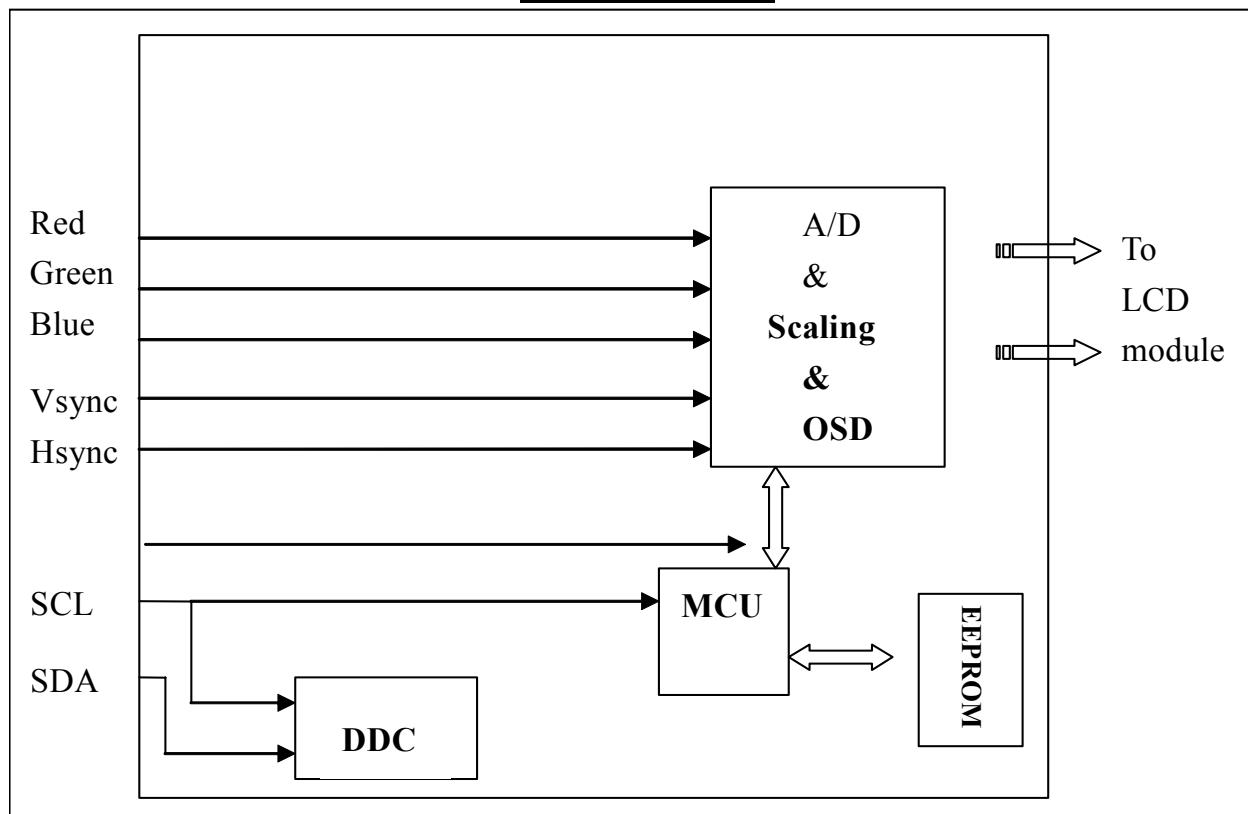

### 1. Monitor Block Diagram

The LCD Monitor contains an interface board, and inverter/power/Audio board, keypad board and flat panel. In Inverter/power/Audio board, power section supplies +14V & +5V for Inverter/Audio and Interface board used. The inverter section drives the backlight of panel and the DC-DC conversion. The Audio section drives speaker (2 x1W).

### 2. Interface BOARD DIAGRAM

Interface Board

### **3. Electronic Circuit Theory**

#### **3.1 Switching Mode Power Supply**

##### **3.1.1 AC Current Input Circuit**

P801 is a connector for connecting AC Power. F801 is a fuse to protect all the circuit. AC input voltage is from 90v to 264V. R820 and R821 joined between two inputting main circuit to prevent man from shock. L801 is used to clear up low frequency wave. C801 and C806 are used to discharge the waves that L801 produced. High frequency waves are damped by C801 and C806. D801 is a rectifier which composed of 4 build-in diodes, it inverts AC to DC.

##### **3.1.2 High Voltage to Low Voltage Control Circuit**

C805 is used to smooth the wave from rectifier. IC802 is a highly integrated PWM controller which build-in power MOSFET. When rectified DC high voltage is applied to the DRAIN pin during start-up, the MOSFET is initially off, and the CONTROL pin capacitor is charged through a switched high voltage current source connected internally between the DRAIN and CONTROL pins. When the CONTROL pin voltage Vc reaches approximately 5.8V, the control circuitry is activated and the soft-start begins. The soft-start circuit gradually increases the duty cycle of the MOSFET from zero to the maximum value over approximately 10ms. If no external feedback/supply current is fed into the CONTROL pin by the end of the soft-start, the high voltage current source is turned off and the CONTROL pin will start discharging in response to the supply current drawn by the control circuitry.

Resistor R803, R807, R824 and R825 are for line over voltage shutdown(OV) and line under-voltage detection(UV).

Resistors R801, R805, R822, R823 are for external current limit adjustment. And used to reduce the current limit externally to a value close to the operating peak current of primary about 1.35A. The mean is power will protected when the primary current over about 1.35A.

When PWM is turned off, the main current flow will be consumed through D804, and ZD802, This will prevent MOSFET which built-in IC802 from being damaged under large current impulse and voltage spike.

D806 and C815 to provide internal Auxiliary current to CONTROL pin during normal operation. Otherwise, error amplifier and feedback current input the CONTROL pin for duty cycle control.

##### **3.1.3 DC\_5V and DC\_14V Output Circuit**

For DC 5V, D805 is used to rectify the inducted current. R806 and C811 are used to store energy when current is reversed. The parts including C814, C814, C822, C821, B801 and L803 are used to smooth the current waves.

For DC 14V, D803 is used to rectify the inducted current. R802 and C802 are used to store energy when current is reversed. The parts including C808, C810 and L802 are used to smooth the current waves.

##### **3.1.4 Feedback and OVP Protect Circuit**

Pin R of IC803 is supplied 2.5-v stable voltage. It connects to 5V and 14V output through R811, R810 and R818. R811, R810 and R818 are output sampling resistor. When the sampling voltage more than 2.5V or less than 2.5V, current of FB IC802 will change, this can change the voltage from T801.

For 5VDC output OVP, ZD803 is a Zener Diode, when 5 voltage up to 5.6V, the zener current cause R819 voltage to ground is up to 0.7V, Q801 being triggered and OVP working. For 14VDC output OVP, ZD804 is a Zener Diode, when 14 voltage up to 18V, the Zener current cause R819 voltage to groung is up to 0.7V, Q801 being triggered and OVP working. The current of potential is used to make build-in diode light. Current of FB to IC802 will be changed, this can change the voltage from T801.

Q802, R827, R828 and ZD801 make up of dummy loading circuit. For start-up sequence, during 5V output take place high loading first, this dummy loading circuit operated to insure 14V not be increased.

#### **3.2 I/F Board Circuit**

##### **3.2.1 RGB CAPTURE**

- Signal RED, GREEN, BLUE input through CN103 #1,#2,#3, Stop DC via C112, C114 and C116, and then enter into U105 (TSM56AL) analog input terminal #18,#20,#23, and then

TSUM56AL deals with signal internally. TVS101, TVS102, TVS103 are ESD protector to prevent U105 from ESD.

- Signal DDC\_SCL (series clock) inputs via CN103#15, and then passes through ZD101 Zener for ESD protection, goes into U105 #31.
- Signal DDC\_SDA (series data) inputs via CN103#12, and then passes through ZD107 Zener for ESD protection, goes into U105 #30.
- Signal TTL vertical sync. (Vsync) inputs via CN103 #14, and then clamped by ZD105 Zener, passes through R129, and then goes into IC U105 (TSUM56AL) #28.
- Signal TTL horizontal sync. (Hsync) inputs via CN103 #13, and then clamped by ZD106 Zener, passes through FB101,R130, and then goes into IC U105 (TSUM56AL) #27.
- CN103#5 is defined as cable detect pin, this detector realize passes through R122 Pull hight, go into U105#35.
- U103 power is supplied by PC via CN103#9, or supplied by Monitor self via D103.
- U103 is an EEPROM IC which is memory and EDID data saved in it.

### 3.2.2 Buttons Control

- Button "Power" on right side bezel connects to U105 (TSUM56AL) #88 through R161, via CN105#4.
- Button "UP" "DOWN" "MENU" "AUTO" on right side bezel connects to U105 (TSUM56AL) #91,#90,#89,#92 through R158,R159,R160,R157, via CN105 #7, #6, #5, #8.
- U108 is an EEPROM IC which memory OSD setting and save the value adjusted by user.
- LED Indicator on Front Bezel
  - a. When press button "power", U105 (TSUM56AL) #42 sends out a low potential, via R188, flow to CN105 #2 on keypad, LED Blue ON.
  - b. When in "Suspend" mode, U105 (TSUM56AL) #41 sends out a low potential, via R189, flows to CN105 #1 on keypad, LED Amber ON.

### 3.2.3 Mstar CHIP U105 (TSUM56AL)

- U105 (TSUM56AL) #54. #55. #58~#65 output 8 bit even LVDS digital data to panel control circuit through CN104.
  - U105 (TSUM56AL) #67~#74. #77. #78 output 8 bit odd LVDS digital data to panel control circuit through CN104.
  - U105 (TSUM56AL) #86 outputs Brightness "PWM" signals to control CCFL brightness.
  - U105 (TSUM56AL) #48 output PPWR "H" potential to make Q103 conducted, and then make Q101 conducted, +5V flow to CN104#1~#3 as Panel VDD .
  - U105 (TSUM56AL) #85 output CCFL\_ON/OFF "H" potential to control Inverter on/off.
  - TCLK by Crystal 14.318MHz input to U105 (TSUM56AL) #96,#97.
- Please refer to TSUM56AL Pin Assignments table in page

### 3.2.4 Regulator Circuit

- +5V is from switching mode power supply for Panel used.
- +3.3V generates from +5V through C101 and C103 filtering and U101 which is output +3.3V LDO for U103, U106,U108 and U105 used.
- +1.8V generates from +5V through C101 and C103 filtering and U102 which is output +1.8V LDO, for U105 used.

### 3.2.5 Audio circuit

- Audio Signal R,L,GND input through P701,#2,#5,#1, Stop DC via C711, C712, and then enter into U701 (TDA7496L) analog input terminal #4,#9.
- U701 (TDA7496L) #14,#17 output R,L audio data to Speaker through CN701.
- U105 (TSUM56AL) #94 output MUTE "H" potential to control U701on/off.
- U105 (TSUM56AL) #93 outputs Volume "PWM" signals to control U701 Volume.

## **4. Inverter circuit**

### **4.1 Low voltage to high voltage circuit**

14VDC provides the power for IC501; the control signals Brightness and ON/OFF come from I/F board. ON/OFF signal connect to pin8 of IC501 and makes IC501 enable. Brightness signal connect to pin7 of IC501 and regulates the panel brightness, R526, D515, R529, C505 make up a network of delaying time circuit and R523, R524 make up a divided voltage network, C504 is used to dump noise. The operation frequency is determined by the external Resistor R522 and capacitor C529 connected to pin5 of IC501. BURST MODE dimming pulse frequency and duty is regulated by I/F board. C503 is used for soft start and compensation, C502, C528 are used for dump noise.

The output drives, include NDR4, NDRV2, PDRV3, PDRV1 (pins1, 3, 15, 16 respectively) output square pulses to drive MOSFET U501, U502, and each of U501, U502 is consist of a N channel MOSFET and a P channel MOSFET. U501 and U502 work as full-bridge topology, it is high efficient, zero voltage switching.

During start up, VSEN (pin9) senses the voltage at the transformer secondary. When VSEN reaches 3.0V, the output voltage is regulated. If no current is sensed approximately 1.5 seconds IC501 shunt off.

The current flowing through CCFL is sensed and regulated through sense resistor R509, R511. The feedback voltage through R506, R507, C508 connected to Pin11 (ISEN), then compared with a reference voltage (1.5V) via a current amplifier, resulting in PWM drive outputs to full-bridge switches.

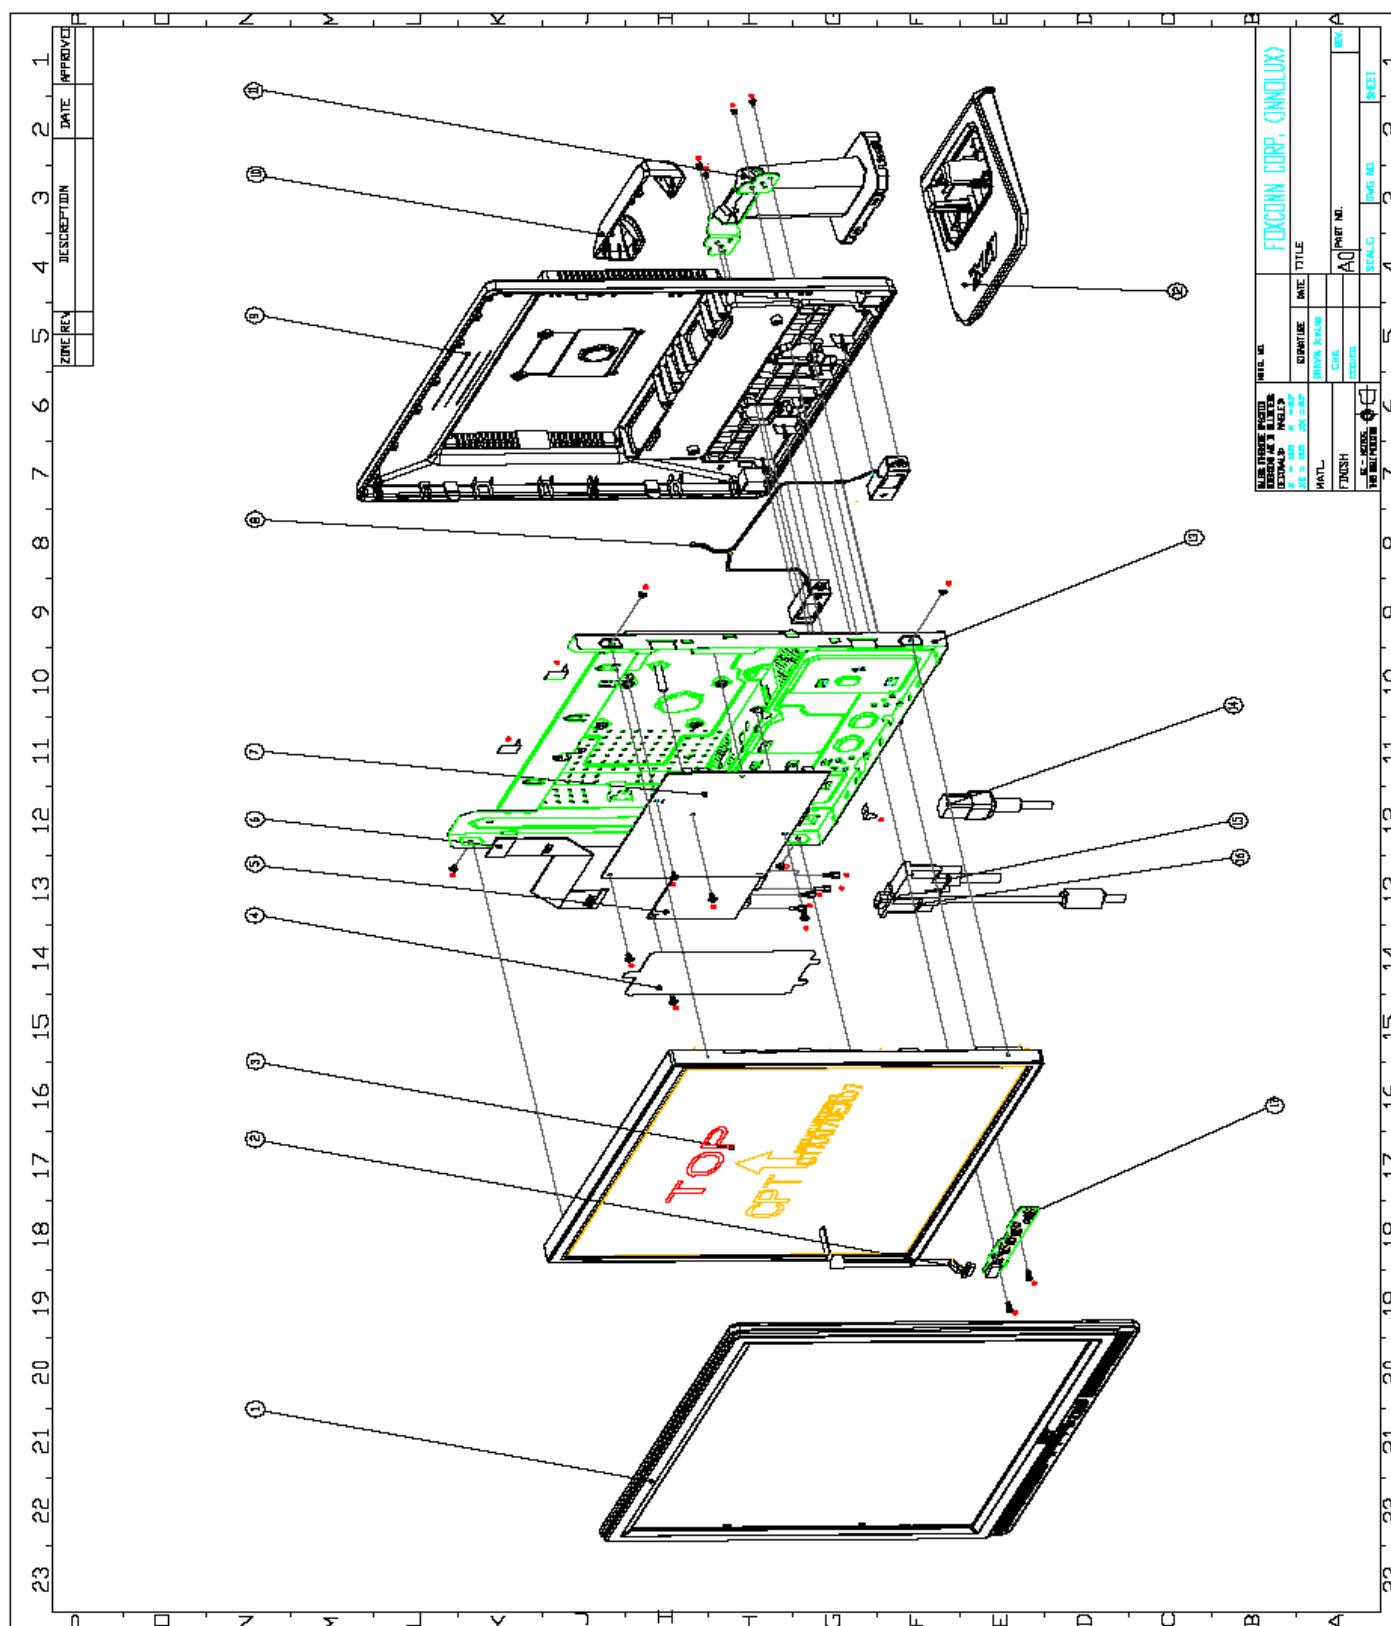

#### 4.2 Protection circuit

Over Voltage Protection: R501and R502 are connected in high voltage output connector, the divided AC voltage is inverted DC voltage through D508, R505 and C507are used to rectify wave & dump noise. Then the voltage signal reaches Pin9 VSEN of IC501, when the voltage changes, build-in PWM of IC501 will adjust output voltage.

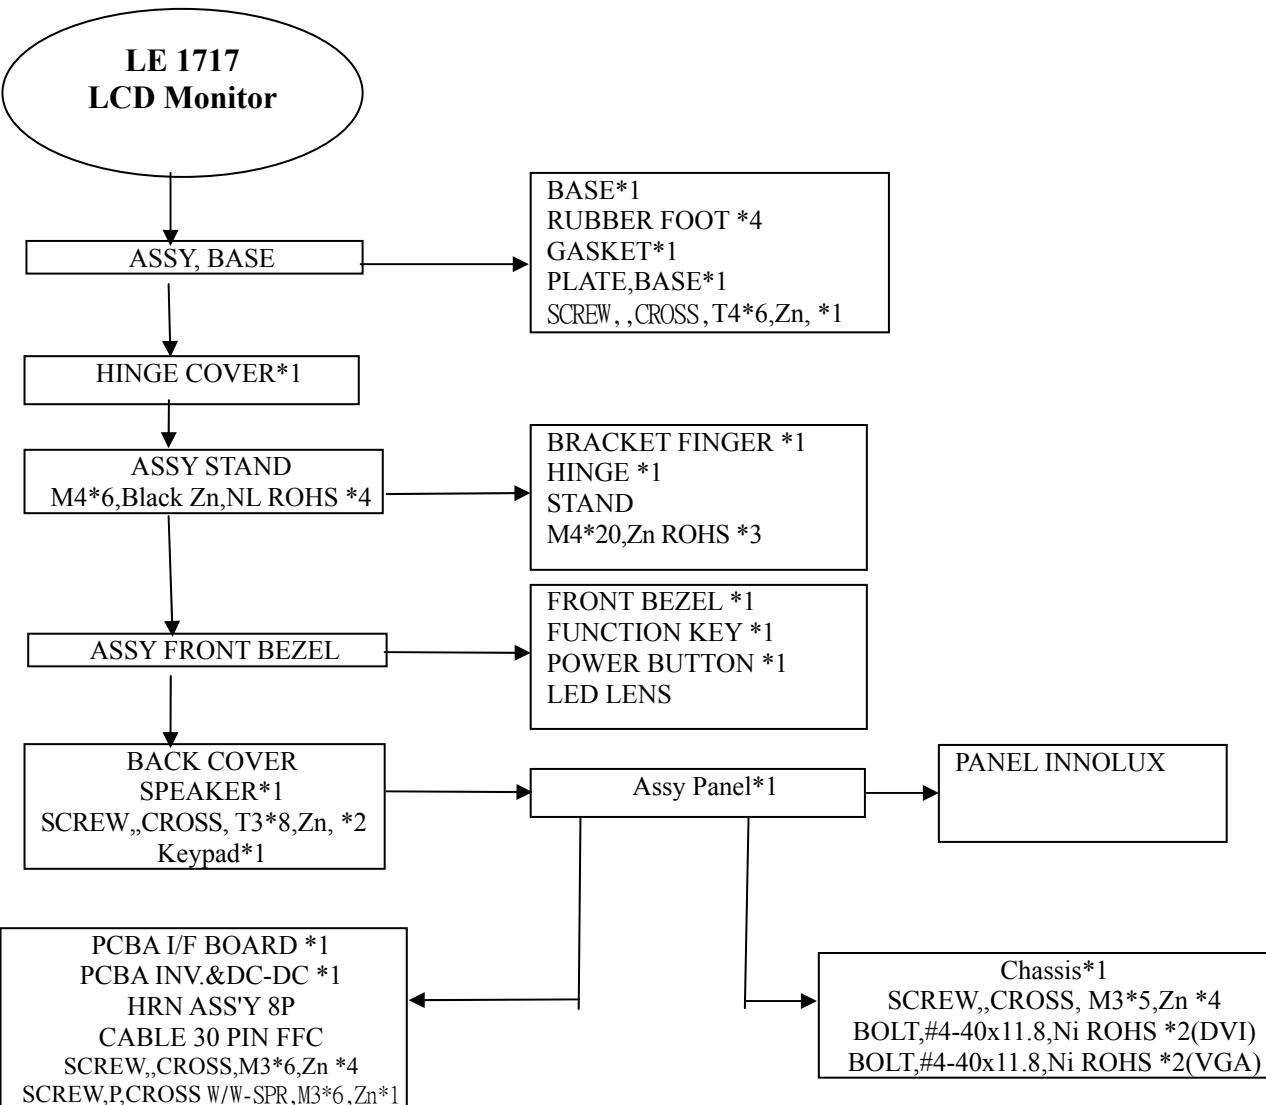

Open Lamp Protection: In normal operation, the resistors R510, R511, R512, R509 are sensed a high level AC voltage, the AC signal OP1 invert DC voltage through D509, R515, C533, and the high level DC voltage reaches the gate pin of Q502, similarly, the gate pin of Q503, Q504, Q505 has high level DC voltage. So the gate pin of Q501 has a low level voltage, and the IC501 is normal operation. Once one of signal OP1, OP2, OP3, and OP4 is low, the voltages of Q501 gate pin is high level, and make the voltage of ISEN low level, the IC501 will be shunt down.

## **Chapter 4- Disassembly & Assembly**

## 1. Exploded Diagram

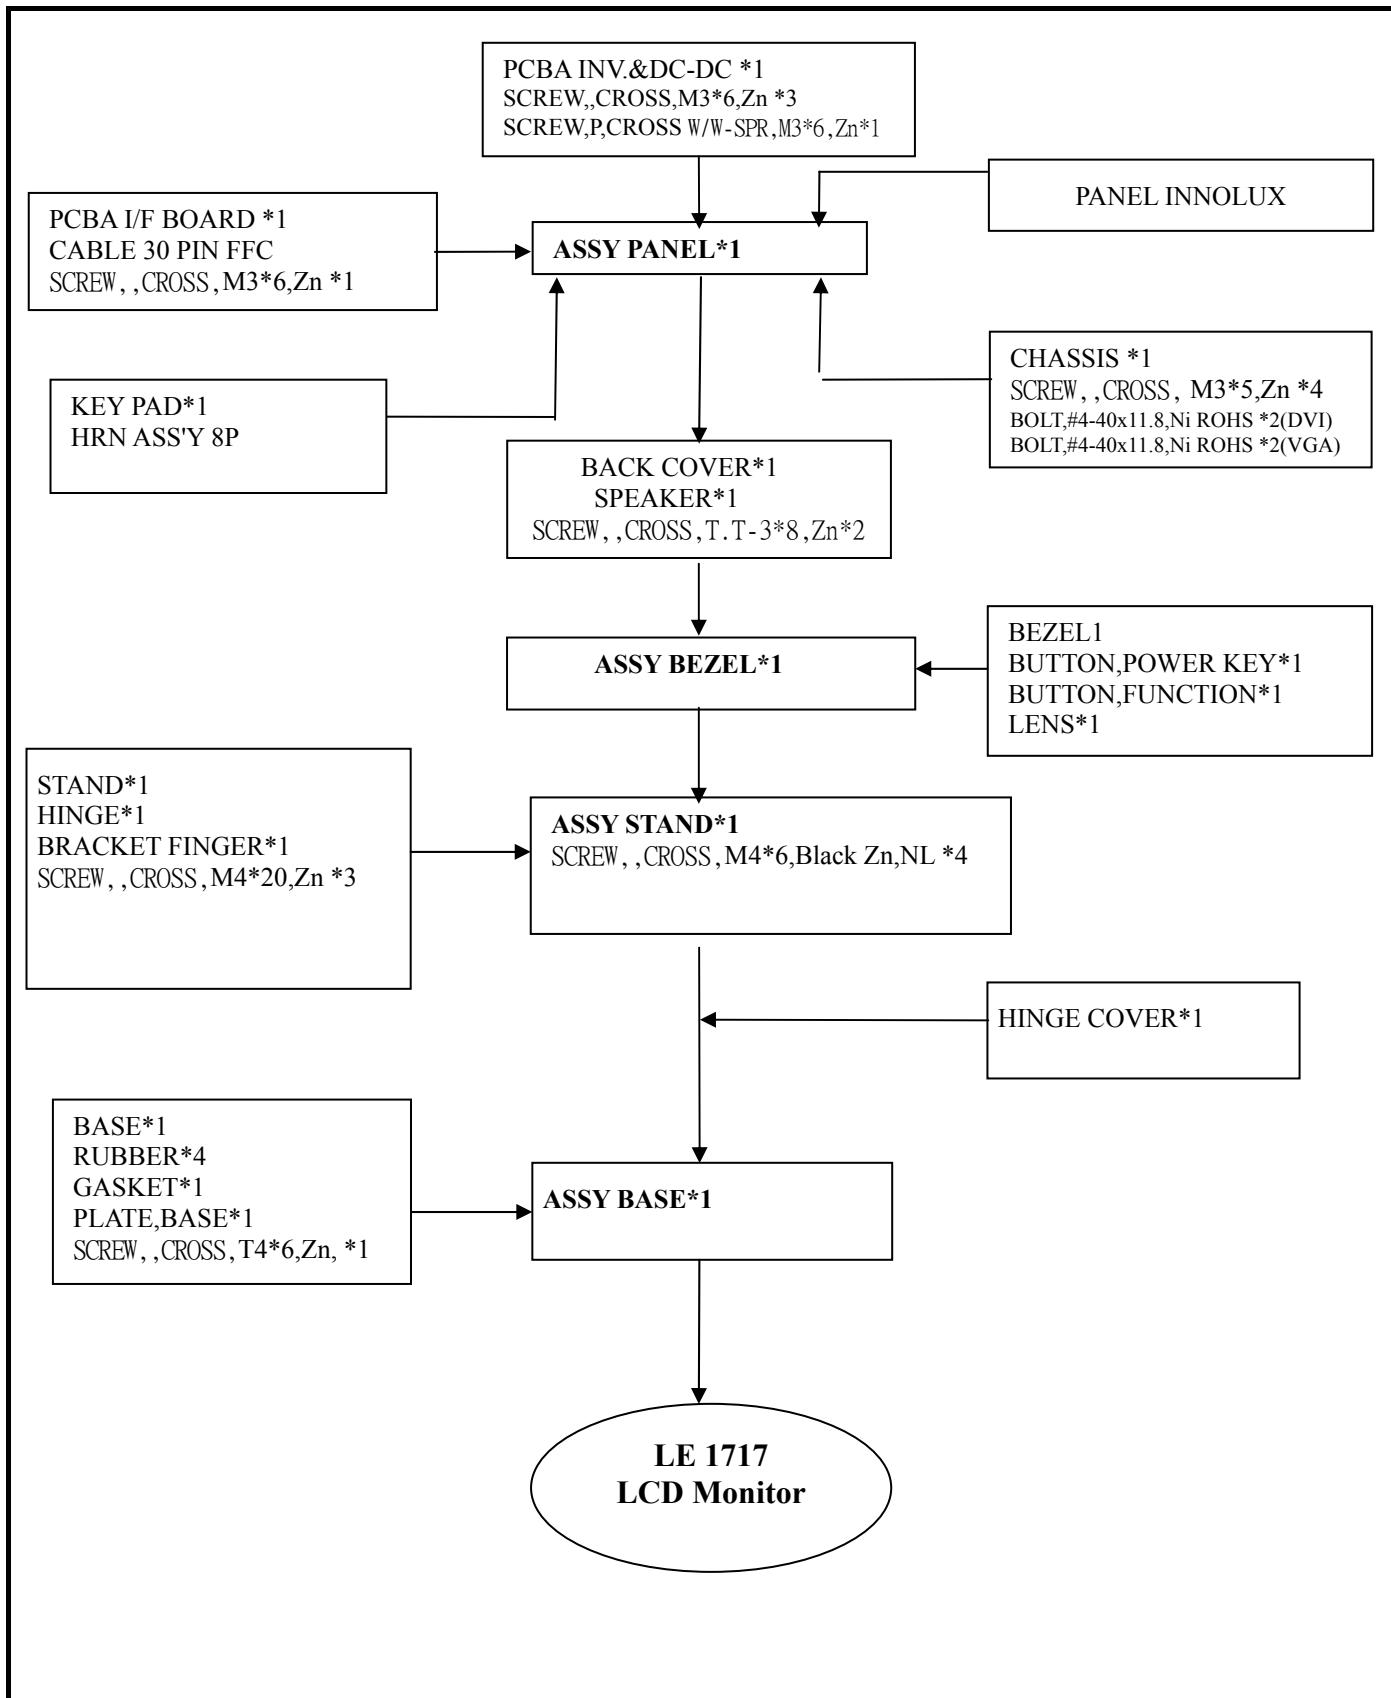

## 2. Disassembly Block

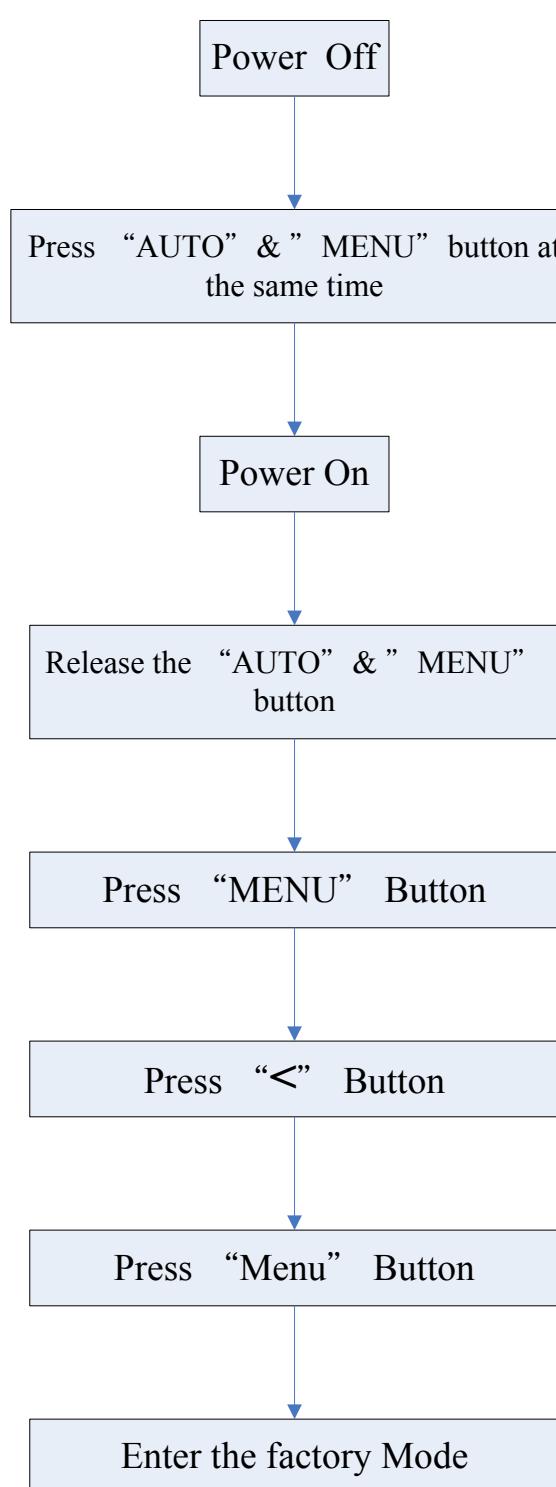

### Note:

The DIS assembly direction please following direction of arrowhead

### 3. Assembly Block

**Process To Access Factory Mode**

## Chapter 5- TEST AND ADJUSTMENT

### 1. GENERAL POINTS

#### 1.1 Test Equipment or Tool

- 1.1.1 Test pattern generator: PC or video pattern generator (Chroma-2326/2160/2130)
- 1.1.2 Color analyzer: Chroma-7120
- 1.1.3 Power meter: AC Source Chroma-6408
- 1.1.4 Electrical safety tester: Chroma (Zentech) 9032A
- 1.1.5 Stereo source: Music or signal generator input
- 1.1.6 Auto shock fixture
- 1.1.7 Temperature and humidity sensor
- 1.1.8 DDC interface card and EDID file

#### 1.2 Preset Test Pattern

- 1.2.1 Crosshatch (General-1)
- 1.2.2 Gray Bar (16 & 32 levels)
- 1.2.3 Full White
- 1.2.4 Aging (Burn-in) Pattern: Full Red, Green, Blue, White, and Black

#### 1.3 AC input

All measurements mentioned hereafter are carried out at a normal mains voltage (90 - 264 V<sub>AC</sub> for the model with full range power supply, unless otherwise stated)

#### 1.4 Observation Distance

- 1.4.1 Observation distance from eyes to panel is defined as 50cm
- 1.4.2 Visual distance from instrument to panel is defined as 20cm

#### 1.5 Key Function Description

##### 1.5.1 Control buttons on the front bezel

CONTROL KEY	KEYS FUNCTION
[AUTO]	A. When OSD un-displays, press [AUTO] to perform auto-adjustment B. When OSD displays, press [AUTO] to return to previous level menu
[MENU]	A. When OSD isn't shown on screen, press [MENU] to enter OSD interface B. When OSD displays, press [MENU] to perform function of menu icon that is highlight or enter next level menu
[▶], [◀]	A. When "MENU OSD" displays, press these keys to change the contents of an adjustment item, or change an adjustment value B. When "MENU OSD" un-displays, press [▶], adjust volume high; press [◀] adjust volume low
[POWER]	Power on or power off the monitor

##### 1.5.2 Hot Key Operation

FUNCTION	HOT KEY OPERATION					DESCRIPTION
	AUTO	◀	▶	MENU	POWER	
FACTORY MODE	•			•	ON	Press [AUTO] & [MENU] at the same time, and then press [POWER] for DC power on. OSD menu will be shown with "F" on the left top. Select "F" for entering factory mode.

## 1.6 Burn-in (Aging) Pattern

- 1.6.1 Burn-in patterns are: full Red, Green, Blue, White and Black
- 1.6.2 Stop burn-in pattern by providing with video signal from D-sub or DVI-D connector
- 1.6.3 Enter or exit burn-in mode by setting “burn-in” to be “on” or “off” in the factory mode

## 1.7 Warm Up

All test units have to be done warm up after at least 2 hours in a room with temperature of  $40\pm 5^{\circ}\text{C}$ .  
(Except particular requirement)

# 2. INPUT SIGNAL

## 2.1 Video Signal Input

### 2.1.1 VESA Analog

The video input consists of red, green, and blue signals. The video signals are analog levels, where 0V corresponds to black and 700mV is the maximum signal amplitude. Input impedance of video pins is 75 ohm  $\pm 1\%$ .

#### Sync signal input

The capability of sync signal inputs shall include separate sync. Input impedance: 2k2 ohms the signals are defined as follow:

Separate sync      TTL level, Positive/Negative

### 2.1.2 Input signal mode

#### PRESET TEST MODE TIMING

Resolution	H-Freq. (kHz)	V-Freq. (Hz)	Dot Clock (MHz)	Mode
640 x 480	31.5	60.0	25.175	VESA IBM-AT Compatible machine PC-9800 series
	37.9	72.0	31.500	
	37.5	75.0	31.500	
800 x 600	35.1	56.0	36.000	VESA IBM-AT Compatible machine PC-9800 series
	37.9	60.0	40.000	
	48.1	72.0	50.000	
	46.9	75.0	49.500	
1024 x 768	48.4	60.0	65.000	VESA IBM-AT Compatible machine PC-9800 series
	56.5	70.0	75.000	
	60.0	75.0	78.750	
1280 x 1024	64.0	60.0	108.000	US/IBM Text
	80.0	75.0	135.000	
640 x 350	31.5	70.0	25.175	
720 x 400	31.5	70.0	28.322	
832 x 624	49.7	74.6	57.283	Power Macintosh series
1024 x 768	60.2	75.0	80.000	
	48.8	60.0	64.000	

### 2.1.3 VGA signal cable

15 pin D-sub VGA connector of signal cable.

### 2.1.4 Interface

Analog signal: The input signals are applied to display through D-sub cable.

Length: 1.8 m +/- 50 mm (fixed)

Connector type: D-sub male.

With DDC\_2B pin assignments.

Blue connector thumb-operated jack screws

Pin Assignment:

PIN No.	SIGNAL	PIN No.	SIGNAL
1	Red video input	9	VGA +5V
2	Green video input	10	GND
3	Blue video input	11	GND
4	GND	12	Serial data line (SDA)
5	Cable detect	13	H. Sync / H+V
6	Red video GND	14	V. Sync
7	Green video GND	15	Data clock line (SCL)
8	Blue video GND		

### 3. FUNCTION CHECK

#### 3.1 OSD Function Test

3.1.1 Test mode: 1280x1024 @ 60 Hz

3.1.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.1.3 Check single key function and hot key function about key "Power", "Menu", "▶", "◀", "Exit/Auto", it should operate normally

#### 3.2 Screen Picture Check

3.2.1 Test mode: 1280x1024 @ 60 Hz

3.2.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.2.3 Select OSD menu to execute 'Auto' function, screen picture shouldn't appear abnormal phenomenon and picture on screen should fit in with active display screen.

#### 3.3 Auto Color Balance

3.3.1 Test mode: 640x480 @ 60 Hz

3.3.2 Test pattern: pattern #42 of 5-MOSAIC

3.3.3 Enter "Factory Mode" pressing "Auto color" key, and execute "AUTO".

#### 3.4 Timing Check

3.4.1 Test mode: Refer to preset timing table and power saving mode

3.4.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.4.3 After change above timing and execute "Auto" function automatically, picture should fit in with active display screen.

3.4.4 Under power saving mode, LED lamp on the key board should be orange

#### 3.5 Power Consumption Function Test

3.5.1 Test mode: 1280x1024 @ 60 Hz

3.5.2 Test pattern: pattern #41 of "WHITE"

3.5.3 Adjusting both brightness value to maximum,

3.5.4 Measure power consumption as the following

Status	Power Consumption	LED Display
Normal	< 42W(with audio)	Green
Standby (No H/V sync)	< 1W	Orange
Power off	< 1W	No display

### 3.6 VGA Cable Detect Test

If VGA cable of LCD monitor isn't connected to video pattern generator or PC, "NO SIGNAL" should be shown on screen.

### 3.7 Hi-Pot test

Test condition:

- a. high voltage 2.3KV(DC)
- b. leakage current 10mA
- c. rising time 1 sec.
- d. test time 3 sec.

### 3.8 Grounding Test

Test condition:

- a. test current 30A / 2 sec
- b. impedance < 0.1Ω

### 3.9 Bumping Test

3.9.1 Test mode: 1280x1024 @ 60 Hz;

3.9.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.9.3 To shock LCD monitor lightly at the center of rear cover and edges with 1~2kg/cm<sup>2</sup> force for three times, no abnormal phenomenon is found on panel screen.

## 4. DISPLAY CHECK

### 4.1 Panel Flicker Check

Connect LCD monitor to PC, set LCD monitor to be timing of 1280x1024@60 Hz, adjust brightness to be default value (brightness at maximum), execute "Auto" function, and then check picture of shut down under windows 98 operating system, or flicker-pattern of pixel on-off. It should be that no flicker be found on panel screen.

### 4.2 Panel Defect Inspection

4.2.1 Test mode: 1280 x 1024@60Hz

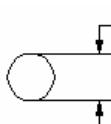

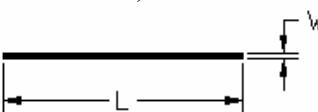

4.2.2 Test pattern: Crosshatch/Full white/Red/Green/Blue/Black/16 color bar/64 gray bars

4.2.3 Display quality must be (according to DIN 13406-2 pixel fault class II)

Defect Type	Specification	Major	Minor
Bright dot defect	THD		•
Dark dot defect	THD		•
Total bright and dark dots	THD		•
Bright Dots – 2 Adjacent B	THD		•
Bright Dots – 3 or more Adjacent	THD		•
Black Dots – 2 Adjacent B	THD		•
Black Dots – 3 or more Adjacent	THD		•
Distance between defect dots	THD		•
Distance between Dark dots	THD		•

Note 1: Dot defect is defined as the defective area is not larger than 50% of the dot area. Bright Dot is defined 5% transmission ND filter.

Note 2: Light Leakage: There shall not be visible light around the customer's bezel after assembly in normal View angle.

Defect Type	Specification Size	Count (N)	Major	Minor
Dot Shape(Particle、Scratch and Bubbles in Display area or on The Polarizer) 	Black spots which appear when B/L operating 0.15mm ≤ D ≤ 0.5 mm	N ≤ 3		●
Line Shape (Particles、Scratch、Fiber and Bubbles in display area or on The Polarizer) 	L ≤ 0.5mm and W ≤ 0.05 mm	Ignored		
	0.5mm < L ≤ 5mm and 0.05mm < W ≤ 0.1mm	N ≤ 4		●
	L > 5mm or W > 0.1mm	N = 0		
Display non-uniformity	There should be non-uniformity through 5% transparency of filter or judge by limit sample if necessary.			●
Bezel	Scratch	No harm		●
	Dirt			●
	Wrap	No harm		●
	Sunken	No harm		●
Label	No label	No		●
	Invert label			●
	Broken			●
	Dirt	Word can be read.		●
	Not clear			●
	Word out of			●
	Mistake	No		●
Screw	Position	Be attached on right position		●
	Not enough	No		●
Limp	No			●
Connecto	Connection	No bend on pins and damage		●
FPC/FFC	Broken	No		●

## 5. PICTURE CHECK

### 5.1 Check brightness uniformity

5.1.1 Test mode: 1280x1024 @ 60 Hz

5.1.2 Test pattern: pattern #41 of "WHITE"

5.1.3 Test tool: Color Analyzer Chroma7120

- 5.1.4 Set brightness and contrast to be maximum, apply pattern as Fig.3, it should be the following requirement:

$$\frac{\text{Min. luminance of nine points (backlight)}}{\text{Max. luminance of nine points (backlight)}} \geq 75\%$$

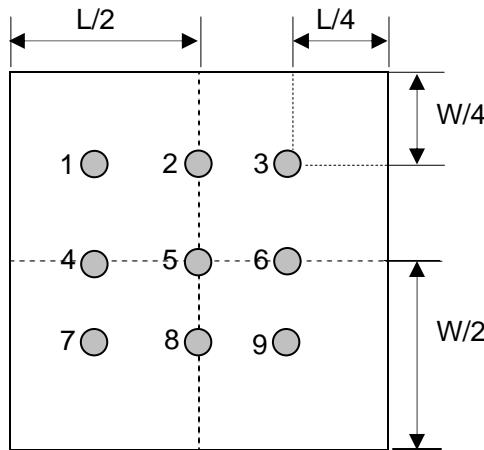

Fig. 3

## 5.2 Color Temperature Check

5.2.1 Test mode: 1280x1024 @ 60 Hz

5.2.2 Test pattern: pattern #41 of "WHITE"

5.2.3 Test tool: Color Analyzer Chroma7120

5.2.4 Set brightness to be maximum and contrast to be 50%, measure color coordinate and luminance by color analyzer as the following:

Mode	Chromaticity Coordinate	
	x	y
9300K	0.283 ± 0.030	0.298 ± 0.030
USER	/	/
6500K	0.313 ± 0.030	0.329 ± 0.030

## 5.3 Brightness Out (Video signal input 700mV ± 2%)

5.3.1 Test mode: 1280x1024 @ 60 Hz

5.3.2 Test pattern: pattern #41 of "WHITE"

5.3.3 Test tool: Color Analyzer Chroma7120

Set brightness and contrast to be maximum with white pattern, to measure the screen center, the light output shall be  $\geq BL \text{ cd/m}^2$

Mode	BL (cd/cm <sup>2</sup> )	Remark
MT170EN01 V7	300	TYP

## 5.4 DDC Data Check

5.4.1 EDID program

5.4.2 Execute main program for EDID writing (refer to model type), using scanner for barcode download.

5.4.3 If writing EEPROM is successful, and then shows text "PASS" on screen; if writing EEPROM is failure, then shows text "FAIL".

#### 5.4.4 EDID data: (For example)

For InnoLux MT170EN01\_V7 Panel

## 6. AUDIO CHECK

### 6.1 Audio Sound Check

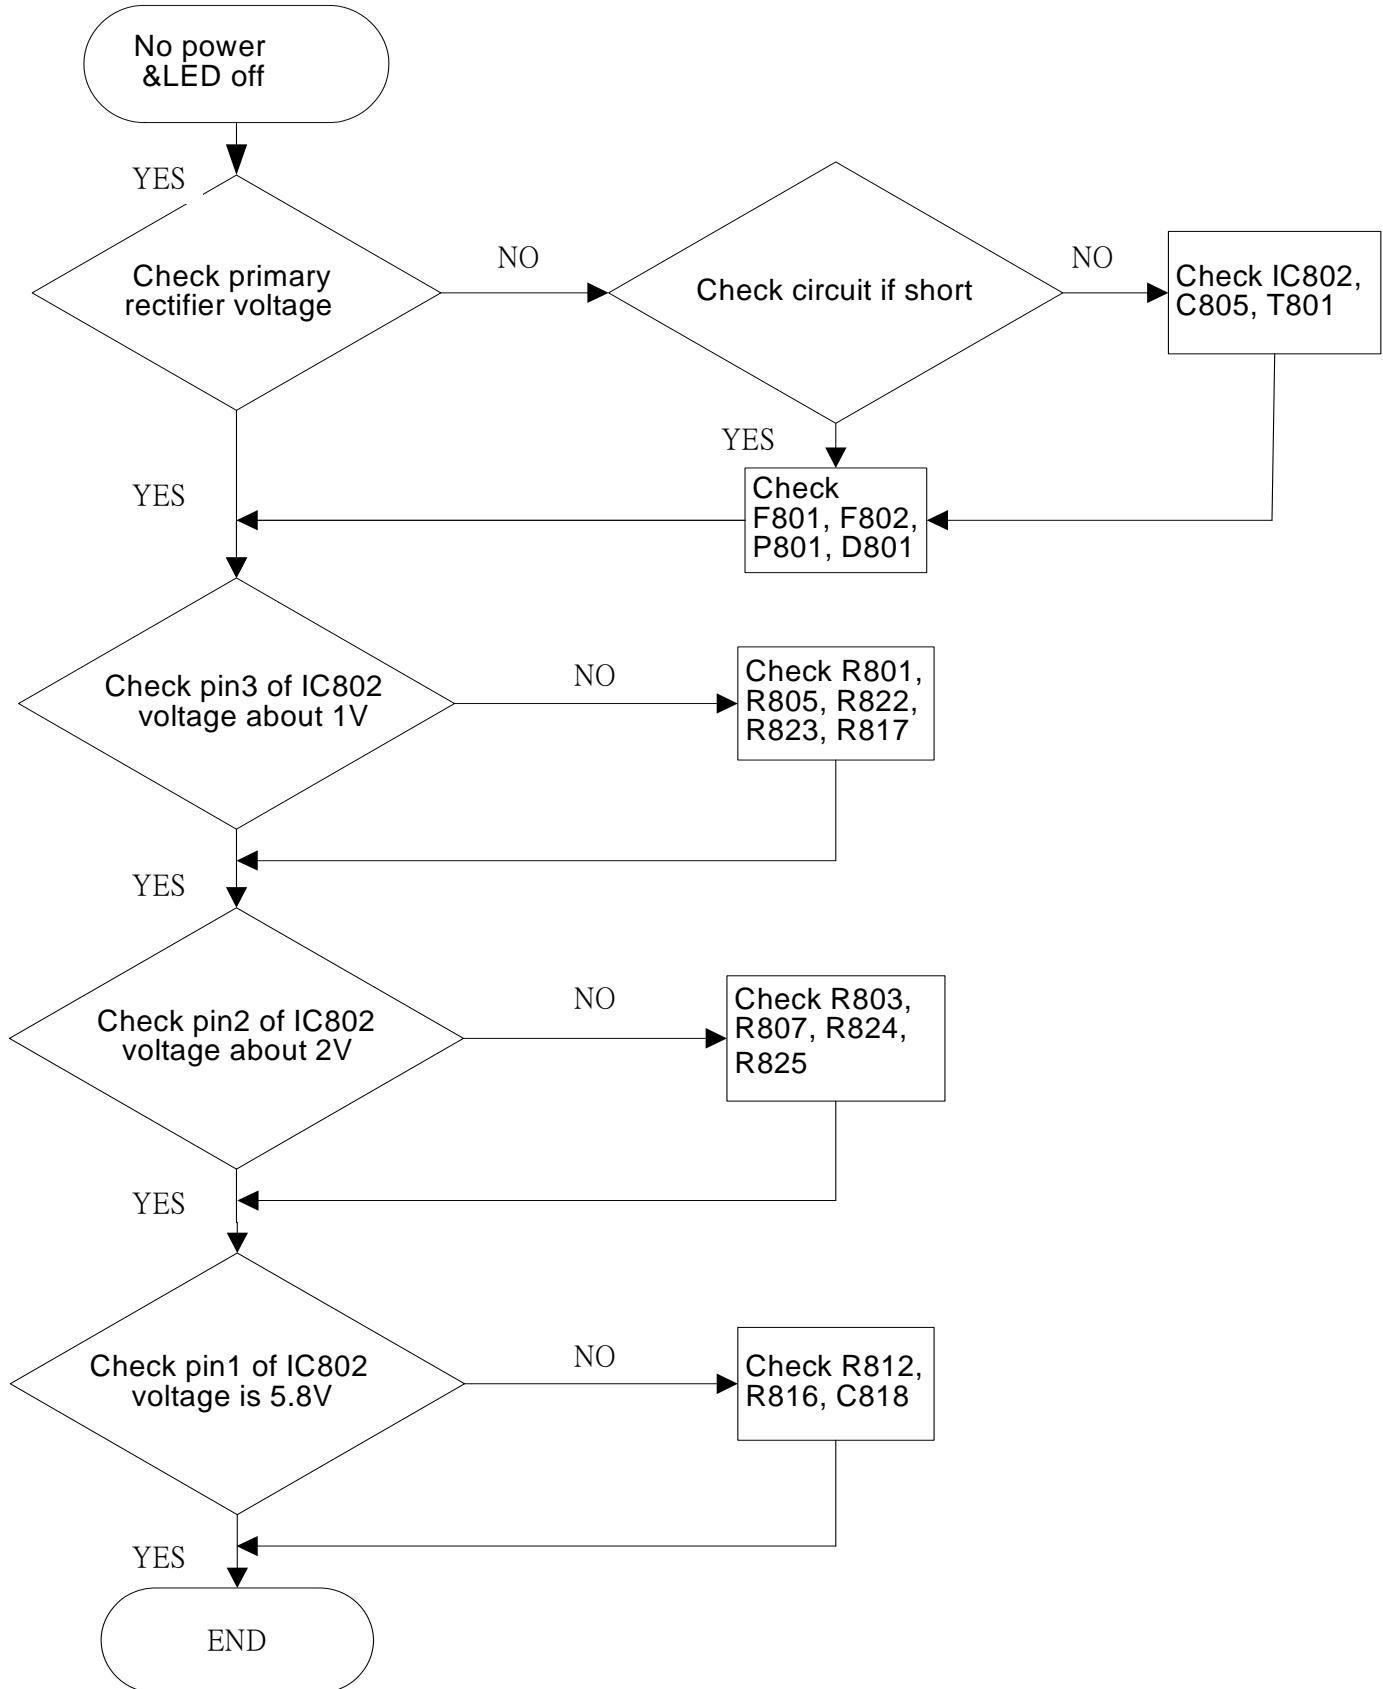

- 6.1.1.1. Apply audio source of test program, (1)voice "LEFT" and "RIGHT";(2)500mVrms sine wave that sweep from 200Hz to 20 KHz, into audio input (light blue), it should be that L speaker sounds while "LEFT" and R speaker sounds while "RIGHT"
- 6.1.1.2. Set the volume control (on OSD) at max (100%). It should be that no buzz or rattling sound occurs over the sweep frequency range.

### 6.2 Audio control test

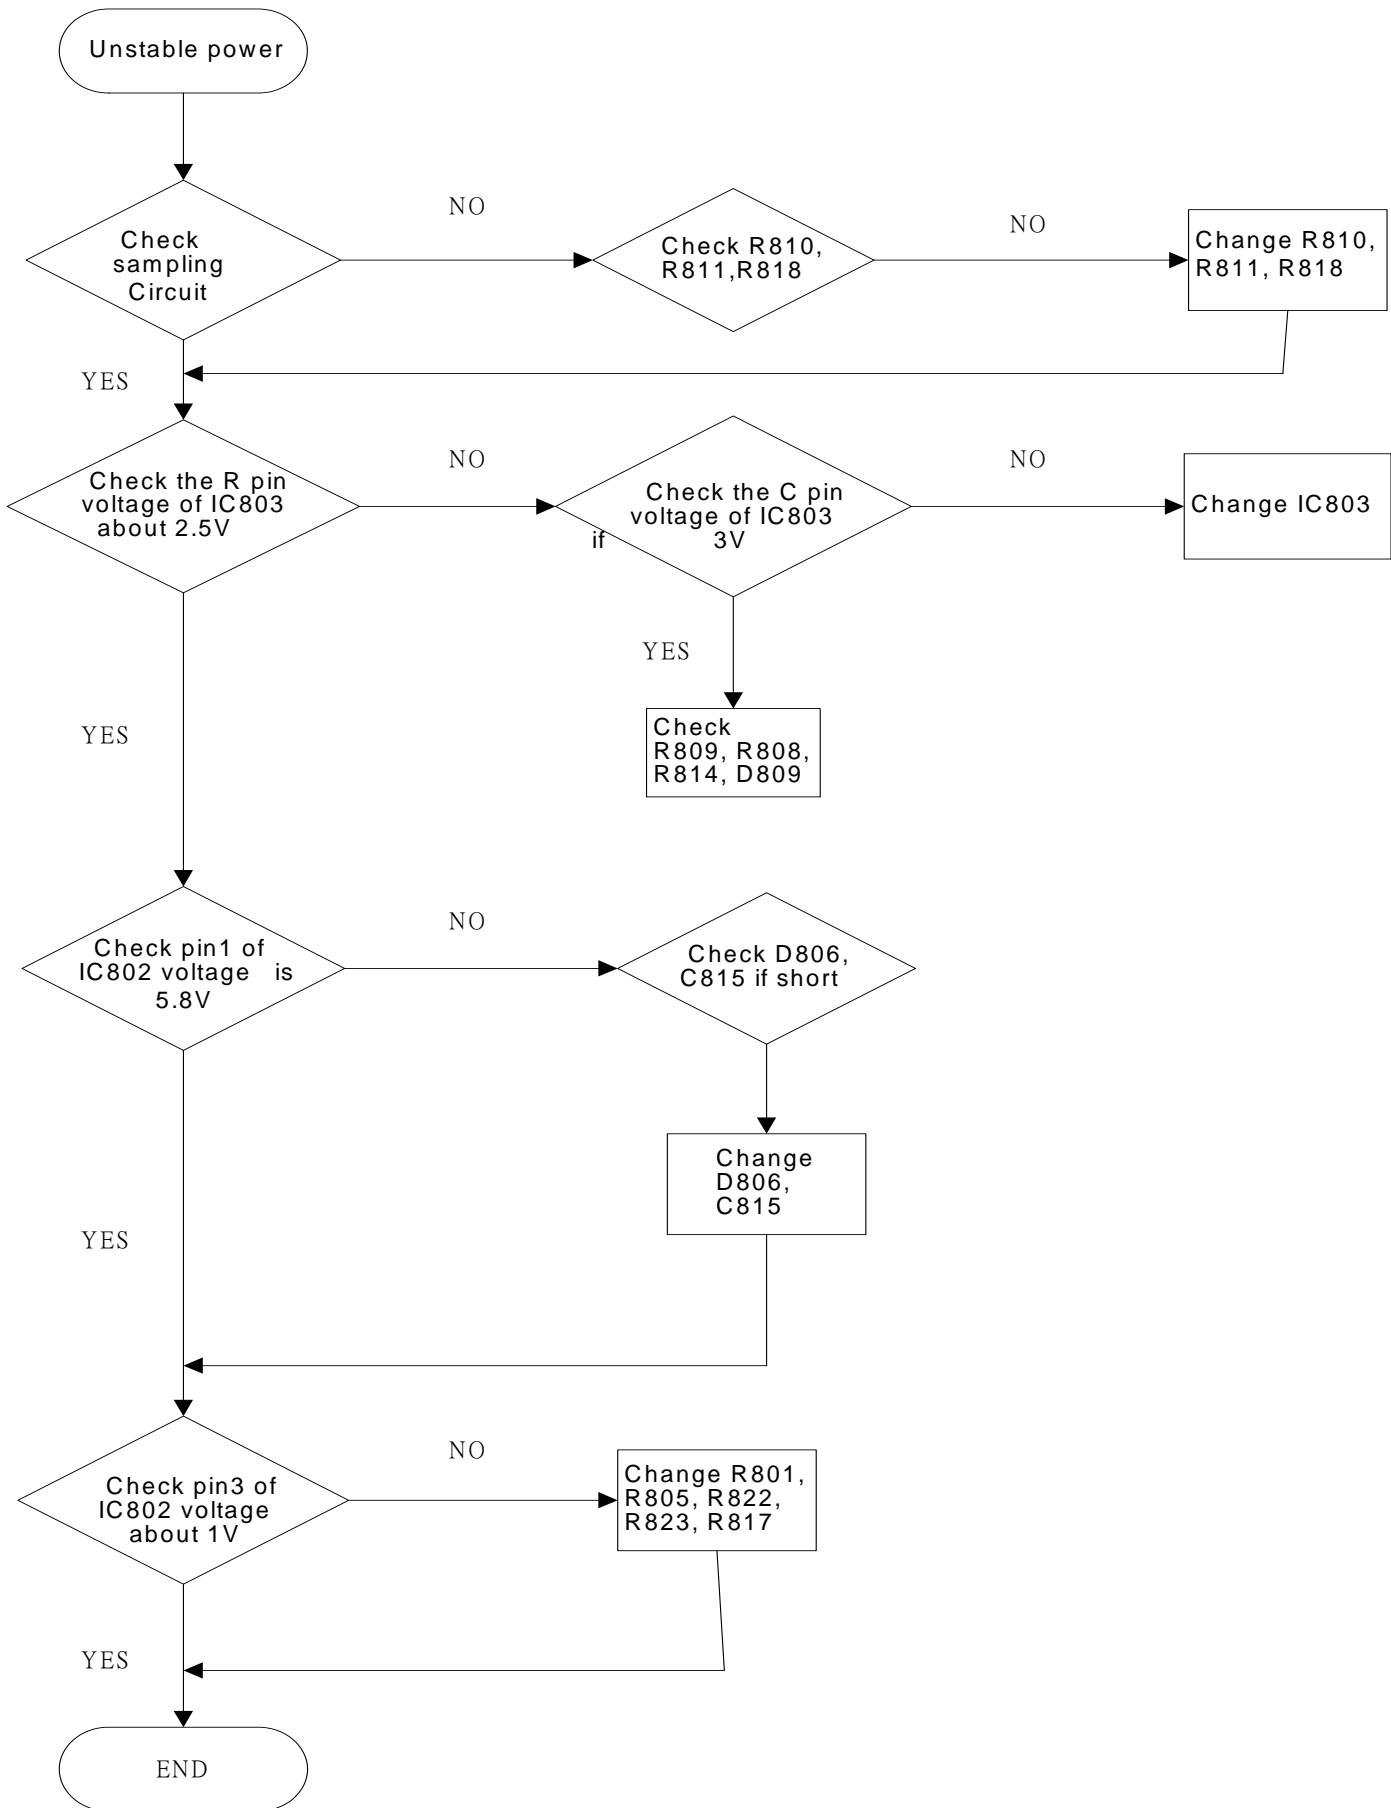

- 6.2.1.1 When OSD is not on screen, press key "►" or "◀", volume adjustment bar appears on screen and value will grow or decrease and sound volume of speakers should be changed.  
If the functional test had been passed, adjust volume bar to be at 90% before exit OSD.  
After inspection, set the audio control out of OSD.

## Chapter 6- TROUBLE SHOOTING

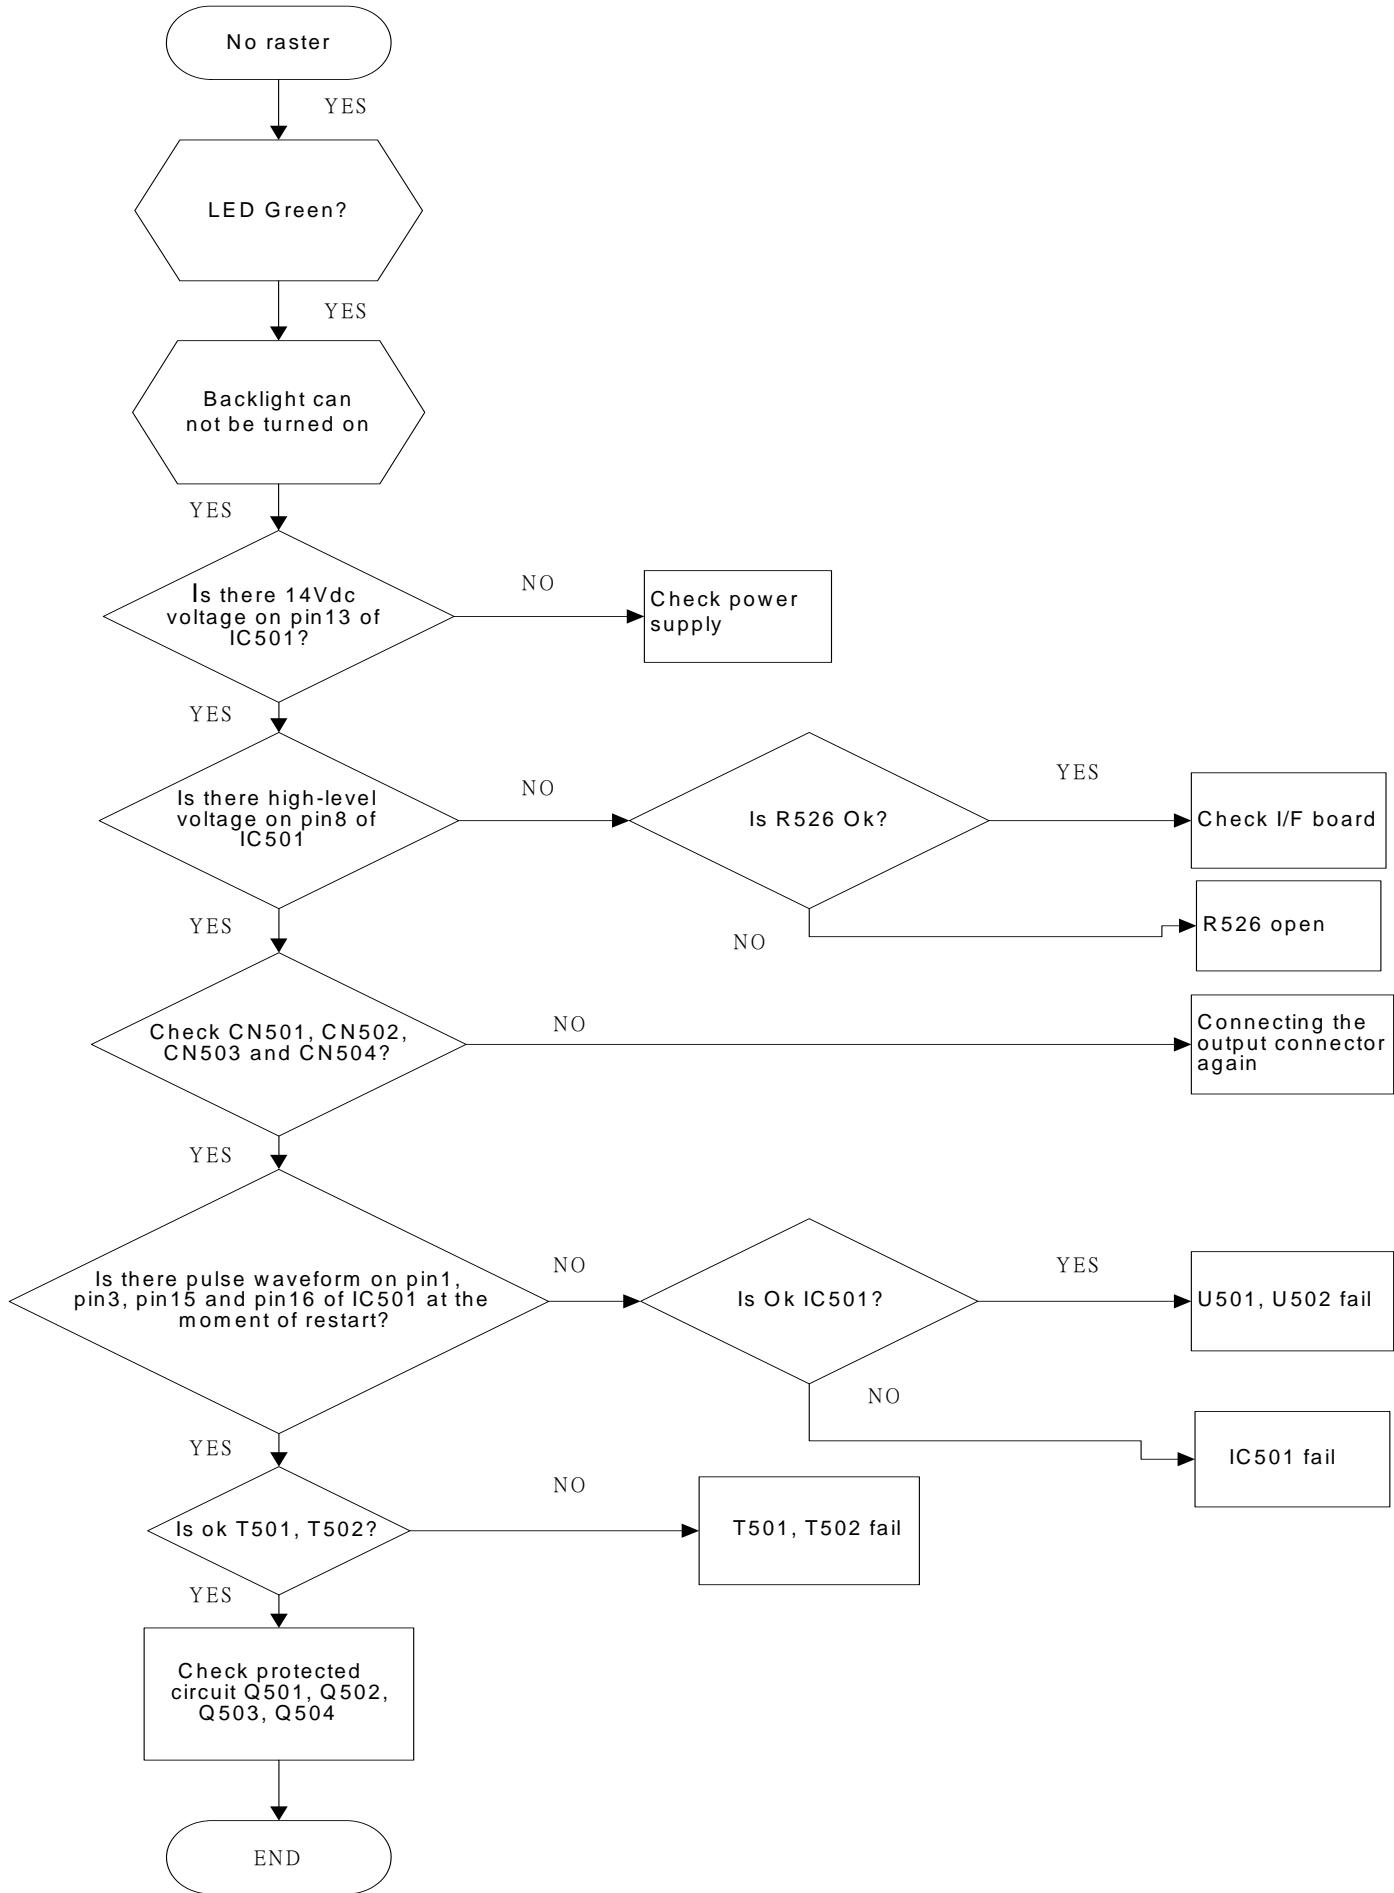

### 1. No Power & LED Off

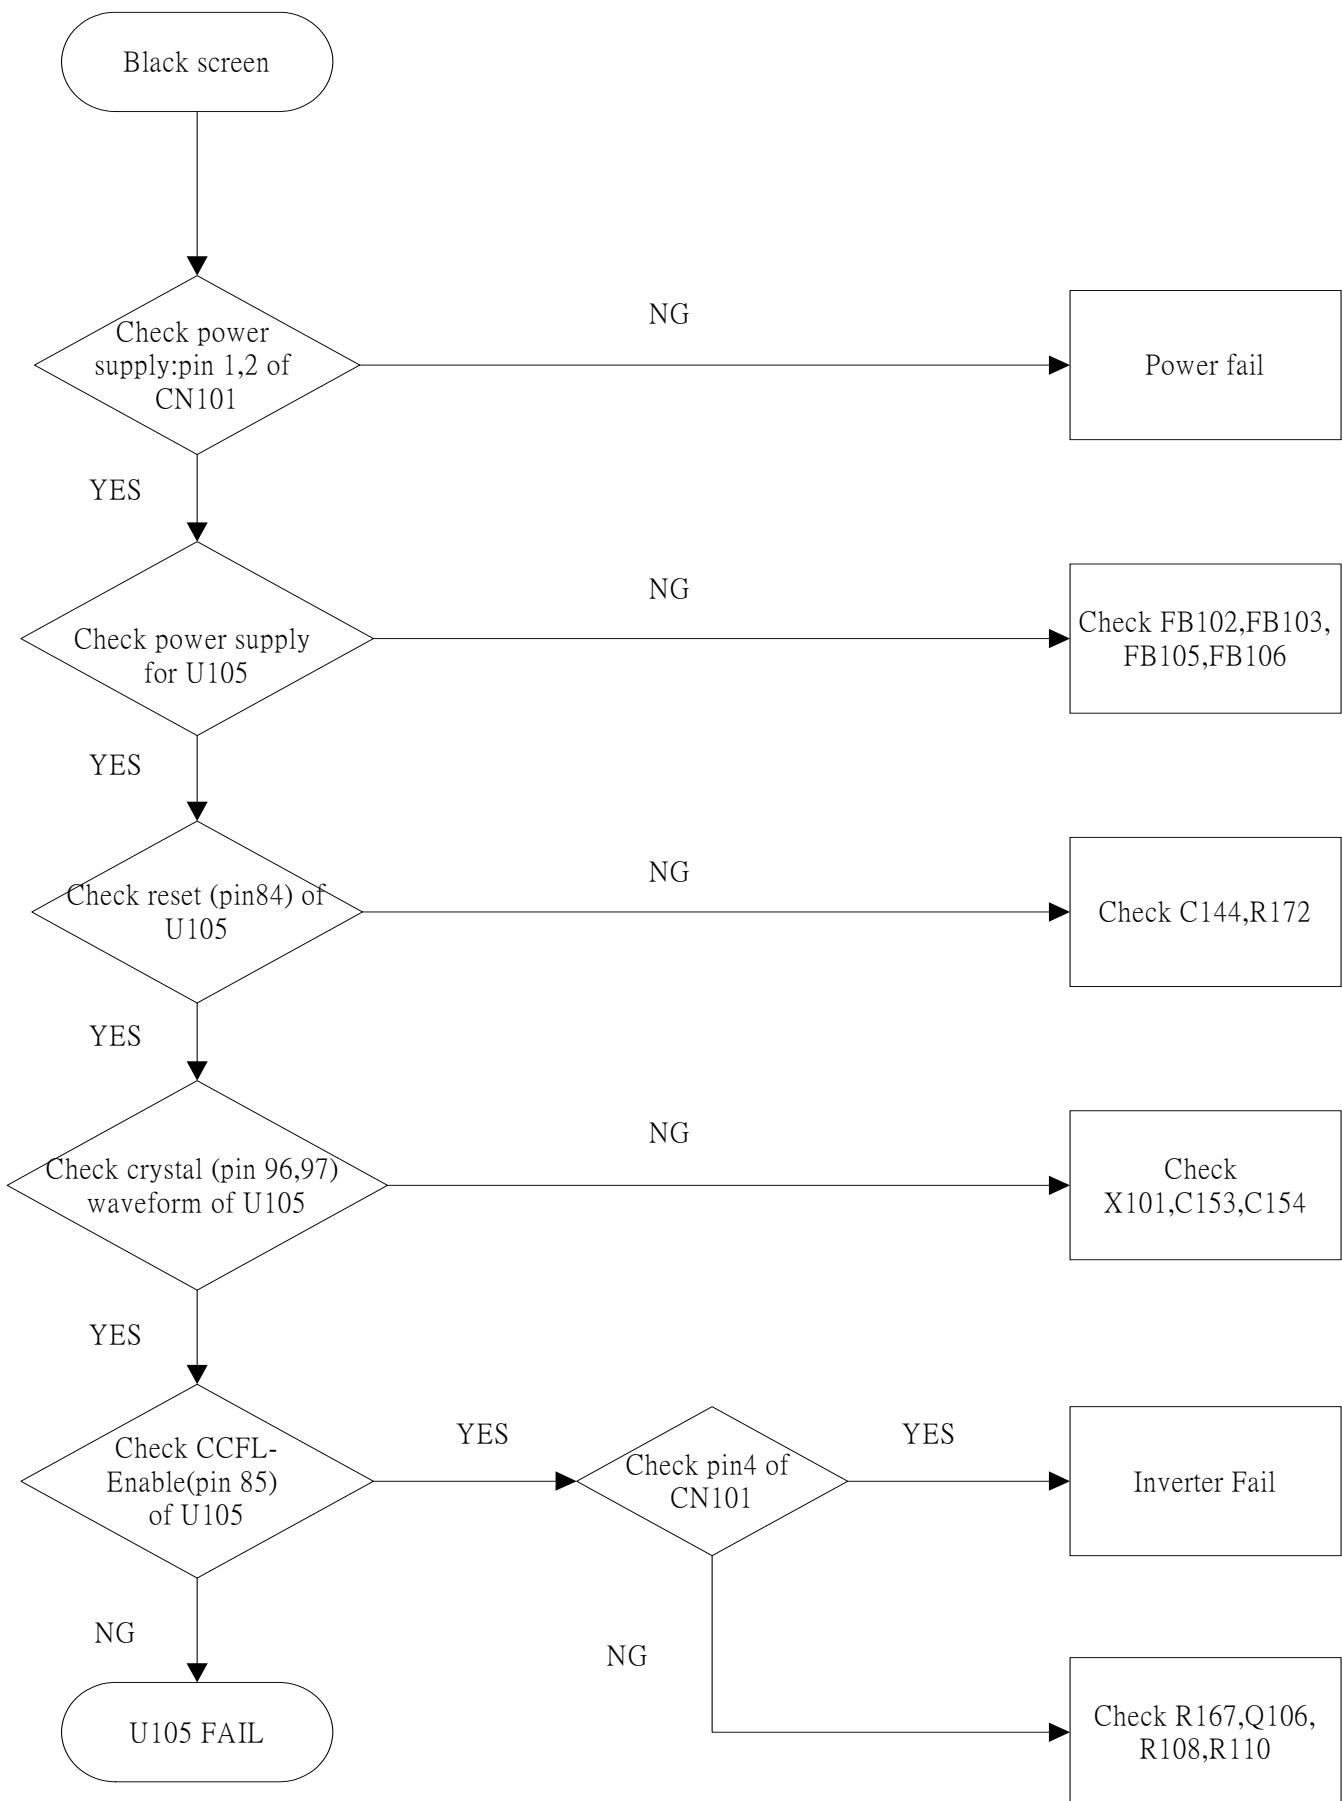

## 2. Unstable Power

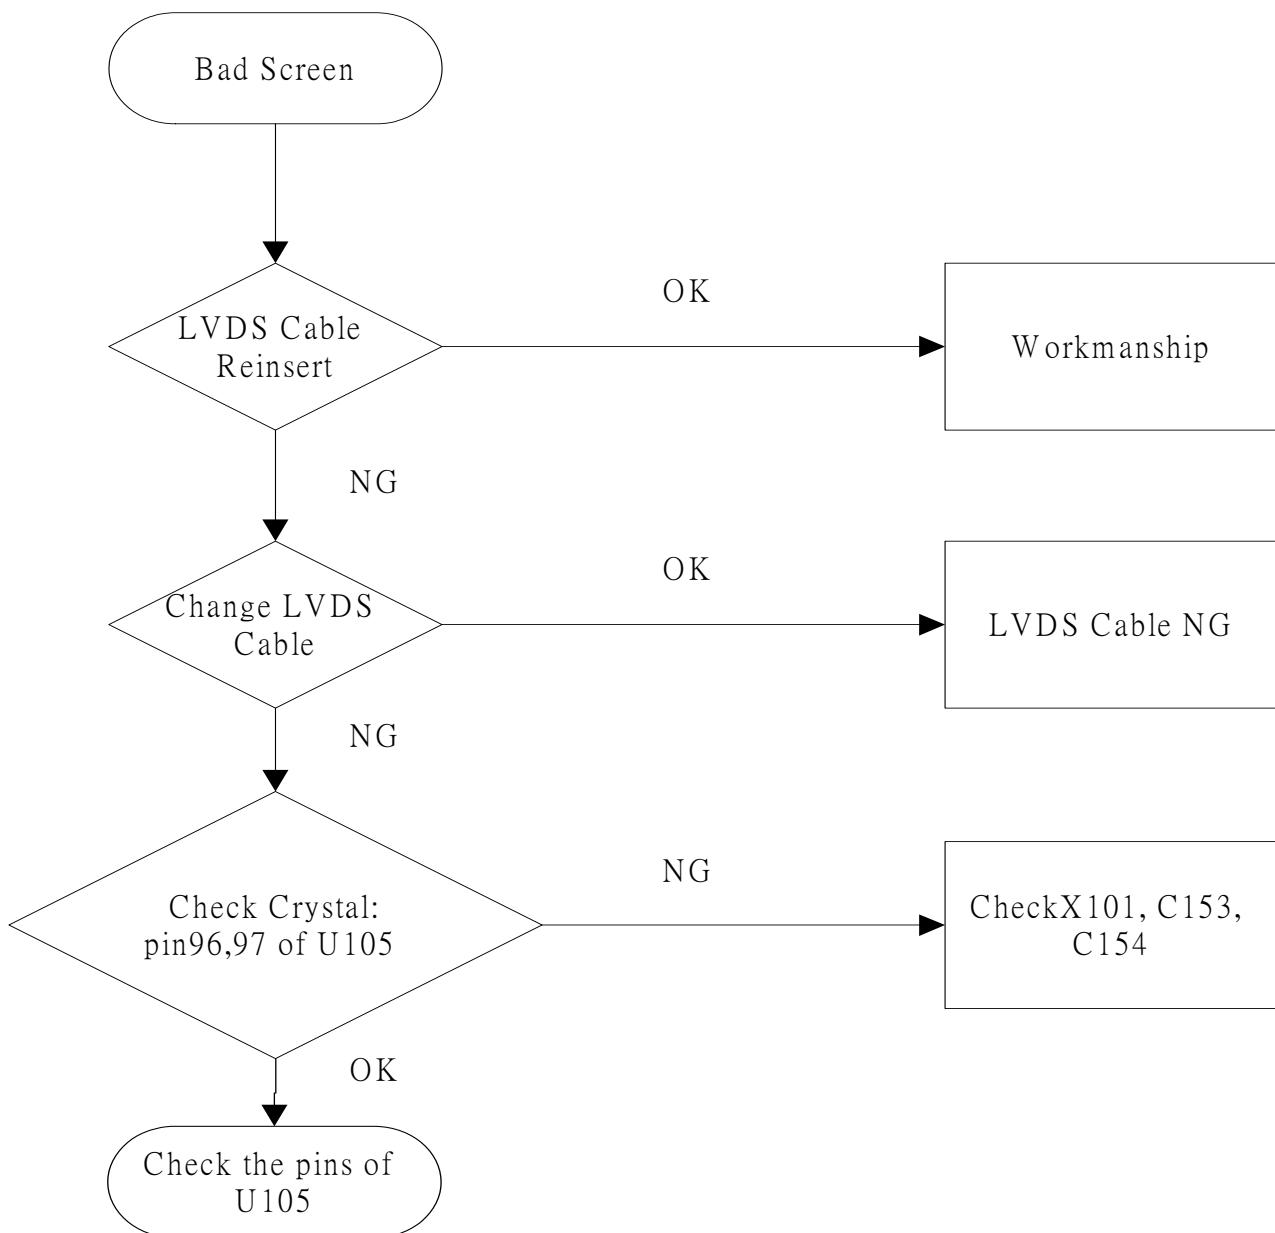

### 3. No raster

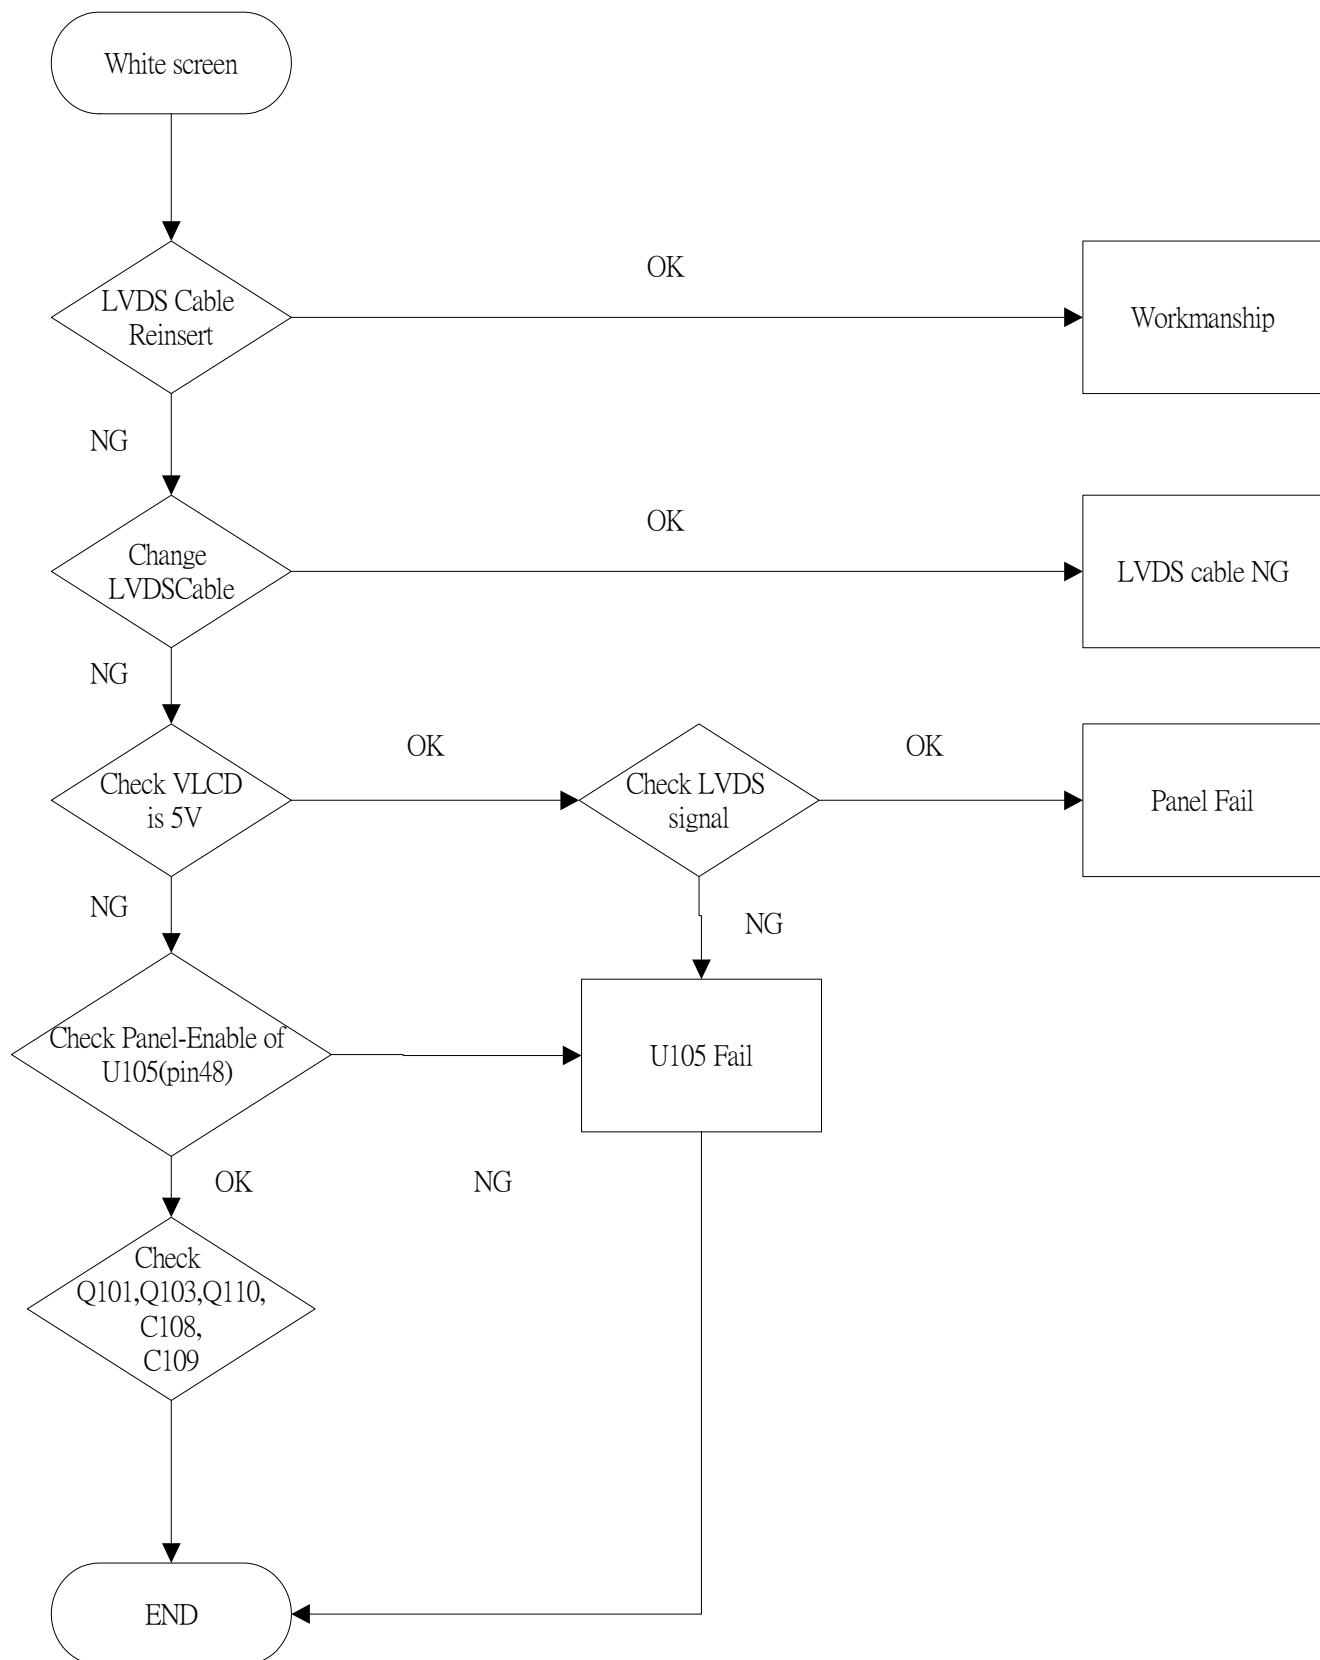

## 4. Black screen

**5. Bad Screen**

## 6. White screen
