

General Description

The AP2952A is a monolithic synchronous buck regulator. The device integrates $130\text{m}\Omega$ MOSFETs that provide 2A continuous load current over a wide operating input voltage of 4.75V to 18V. Current mode control provides fast transient response and cycle-by-cycle current limit. An adjustable soft-start prevents inrush current at turn-on. In shutdown mode, the supply current drops below 1\mu A . This device, available in an 8-pin SOP package, provides a very compact system solution with minimal reliance on external components.
